## Energy Medicine Systems for Pain Management and Accelerated Healing

### Conditions that benefit from the Electro-Myopulse Treatments:

Any musculoskeletal injury like whiplash, sprains, acute sports injuries, acute neck or back pain

Arthritis, plantar's fasciitis, tendonitis

Injuries from motor vehicle collisions

Skin problems like acne, wounds, ulcers, psoriasis, scars, shingles, and hematomas

Sleep disorders, anxiety, stress, chronic fatigue, fibromyalgia

Post-surgical wounds, scar tissue, pain

TMJ problems, neuralgia, headaches

### How Does the Electro-Myopulse Work?

The myopulse's microprocessors measures resistance across traumatized tissue throughout the treatment. The unique waveform of the output current closely matches our body's own "micro-energies". When applied to the body, the microcurrent accelerates tissue repair by stimulating the tissue at the cellular level. When intracellular balance is established, cellular metabolism improves. The microcurrent also stimulates the autonomic nervous system which turns on our body's own healing mechanisms. This gives an optimum environment for the body to repair itself up to 50% faster!

Effective treatment results are achieved by using manual point specific probes or unattended placement pads designed with special conductive bipolar brass alloys.

The currents that these instruments provide "whispers" at the tissue to help balance it. Clients feel little to no sensation during treatment. This treatment is extremely safe and there are no known contraindications.

Most chronic pain sufferers experience significant reduction of pain and increased range of motion even after the first treatment. Because the microcurrent energy helps balance the body, subsequent treatments have a cumulative effect in the healing process thus reducing rehabilitation time.

### What do treatments cost?

First treatment \$40.00

Subsequent treatments \$30.00/15 minutes
